Wise Fishing - TrackWell communicator

About TrackWell

TrackWell ERS is a catch information system for fishing vessels and companies, fish markets and fishing authorities. It is very flexible and comprises the following modules:

- Electronic Logbook
- Product Manager
- Fleet Manager
- Catch Viewer
- Web Interface

About WiseFish

WiseFish is an integrated software for the Fishing Industry. WiseFish allows you to capture complete catch information, including special handling, catch area and -size, all integrated with trip costs. At a glance you are able to access:

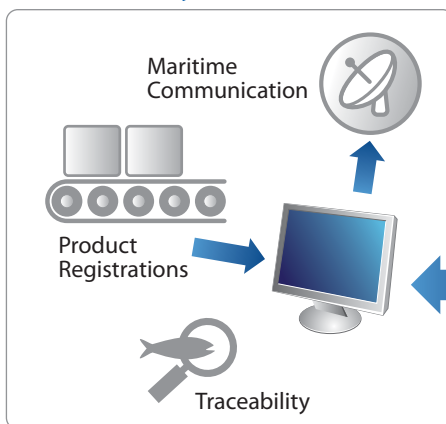

- Crew Settlement
- Quota Management
- Own Vessel and External Fleet catch registration
- Allocate and track catch for production planning
- Fully assign all associated trip costs integrated with the G/L
- Quality inspections can be associated with the trip and are traceable for the vessel/lot
- Traceability from catch to end customer

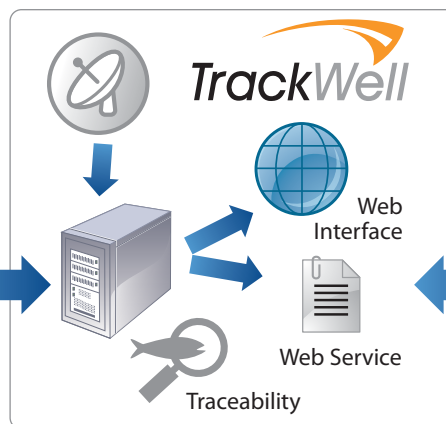

In a nutshell

- The catch data will be imported automatically from the TrackWell system into WiseFish via web services, which saves time and reduces errors.
- Real-time catch estimates into WiseFish allows better production planning and scheduling.
- The actual landing results can be sent to the vessel system providing the vessel captains with a breakdown of the catch by size and quality grades. It also gives them the ability to see historical results for trend analysis to optimize fishing.
